

# Pressure Actuated Water Regulating Valve

## Application

- Used for regulating the flow of water in refrigeration plant with water-cooled condensers.
- Modulating regulation of the condensing pressure and so maintain it constant during operation.
- When the refrigeration plant is stopped, the cooling water flow is shut off automatically.

## Features

- Body Material : forged brass
- Pressure connection : 1/4" flare nut(standard)
- Opening differential pressure: max. 10 bar.
- Refrigerants (condenser side): CFC, HCFC, HFC.
- Media (liquid side): fresh water, neutral brine.

## Specifications

Unit : kgf/cm<sup>2</sup> (Mpa)

Type	Model	Connection	Pressure Range	Max. Working Pressure	Max. Water Pressure	Factory Setting	Wt (kg)
Direct Act	SWR 10	3/8"	6.0 to 18.0 (0.59 to 1.77)	20 (1.96)	10 (0.98)	7.5 (0.74)	0.7
	SWR 15	1/2"					0.82
	SWR 20	3/4"					1.2
